Data Structure

Jorge Paredes-Murillo

Dec, 2024

This document presents an overview of three key datasets related to the Chilean education system, focusing on attendance and performance data for children enrolled in various programs and schools registered with the Chilean Ministry of Education. These datasets provide critical insights into the participation and academic outcomes of students over extended periods, including the challenges posed by the COVID-19 pandemic. Each dataset covers different aspects of student data—yearly attendance in early education programs, monthly attendance in schools, and yearly academic performance—offering a comprehensive perspective on educational trends and patterns across the country.

1 Kinder

This dataset records the yearly attendance of each child participating in one of the following three programs:

1. Sistema de Información General de Estudiantes (SIGE)
2. Sistema de Captura JUNJI
3. Sistema de Captura INTEGRA

Each row represents a child enrolled in a Kindergarten program at a school registered with the Chilean Ministry of Education. The dataset spans from 2011 to 2023, including the pandemic period. It contains a total of 9,879,622 observations.

2 Assistance

This dataset records the monthly attendance of each child enrolled in a school registered with the Chilean Ministry of Education. It covers the years 2011 to 2023, with a gap during the pandemic years of 2020 and 2021. The dataset comprises 382,055,737 observations. Note that the academic year in Chile consists of 10 months, running from March to December.

3 Performance

This dataset records the yearly performance (including attendance) of each child enrolled in a school registered with the Chilean Ministry of Education. It covers the period from 2002 to 2023 and includes 73,668,732 observations. The data is sourced from two systems:

- Registro de Estudiantes de Chile (RECH) for the period 2002 to 2008.
- Sistema de Información General de Estudiantes (SIGE) for the period 2009 to 2023.
